EDUCATION

Jamia Hamdard University

New Delhi, India

B.Tech. in Computer Science & Engineering

2023 - Expected May 2027

Coursework: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, System Design

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, C++, SQL

Frontend: React, Next.js, Tailwind CSS, Zustand, React-Dropzone, pdfjs-dist, HTML5, CSS3

Backend: FastAPI, Node.js, Express.js, REST APIs, JWT, Google OAuth

Databases: PostgreSQL (Neon), MySQL, MongoDB, Prisma ORM

AI Engineering: LLMs, LangChain, LangGraph, Google Gemini, Prompt Engineering

DevOps & Tools: Docker, Git, GitHub, GitLab, Vercel, Render, Cloudinary, Postman

EXPERIENCE

ZaviaNexus Infoventures Pvt Ltd

Jan. 2026 - Present

AI Engineering Intern, ZipMinds (AI-Enabled Education Platform for Kids)

- Contributing to ZipMinds, a Python-based AI-enabled education platform that uses LangChain and LangGraph to power an agentic, guided learning experience for kids.
- Gaining hands-on experience building and debugging multi-step, LLM-driven workflows within an agentic AI architecture for a production-bound education product.

PROJECTS

Cortex | AI-Powered Personal Knowledge Workspace

[Live Demo] | [GitHub]

FastAPI, React, PostgreSQL, Prisma, Google OAuth, Vercel, Render

- Built Cortex, a knowledge management app that lets users upload documents and save web sources, then ask questions and retrieve relevant information through a chat interface.
- Modeled application data with Prisma on PostgreSQL to store uploaded documents, saved web sources, and user accounts.
- Integrated Google OAuth for authentication and deployed the React frontend and FastAPI backend separately on Vercel and Render.
- Resolved cross-origin request failures between the Vercel frontend and Render API by configuring the backend CORS allowlist, and investigated OAuth redirect behavior across the two deployed domains.

PicScale | Distributed Image Platform & Monorepo

[Live Demo] | [GitHub]

Next.js, Node.js, Express, TypeScript, PostgreSQL (Neon), Prisma, Cloudinary, Render

- Designed a three-service monorepo separating a Next.js frontend, an Express API gateway, and an isolated background worker, keeping each concern independently deployable.
- Modeled relational schemas with Prisma against a Neon PostgreSQL instance and built a Cloudinary pipeline for on-demand, runtime image transformations.
- Ran image processing asynchronously in the background worker so the API gateway stays responsive under upload-heavy traffic.
- Diagnosed and fixed a Render deployment blocker by reworking native binary generation without changing the core service architecture.

kidsportal | Interactive Learning Platform

React, Vite, Tailwind CSS, FastAPI, Python, MySQL, JWT, Google OAuth

- Collaborated in a 3-person team building an educational platform covering content delivery, analytics, and user progress tracking.
- Built end-to-end authentication with FastAPI on the backend and JWT + Google OAuth on the frontend, covering session management, token refresh, and protected routes.
- Designed the MySQL schema for user profiles, authentication state, and video content to support persistent learning data.
- Built a cognitive game engine and watch-history dashboard with React state hooks to track game and media progress across sessions.

LEADERSHIP & PARTICIPATION

IEEE | Event Management Team

2024-2025

- Led the Treasure Hunt game during Technovoza, coordinating logistics and participant engagement for the event.

Google Developer Student Clubs | Graphic Designer

2023-2025

- Designed posters and event banners for technical and student events held at the university.
