

MOHSINA ALIMA

Full-Stack Developer | AI & Agentic Systems

Final-year CS student building production-grade full-stack systems — seeking Software Engineering internship / full-time roles

New Delhi, India | +91 9798941815 | mohsinaalima2006@gmail.com

EDUCATION

Jamia Hamdard University

New Delhi, India

B.Tech. in Computer Science & Engineering

2023 – Expected May 2027

Coursework: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, System Design

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, C++, SQL

Frontend: React, Next.js, Tailwind CSS, Zustand, React-Dropzone, pdfjs-dist, HTML5, CSS3

Backend: Node.js, Express.js, FastAPI, REST APIs, JWT, Google OAuth

Databases: PostgreSQL (Neon), PGVector, MySQL, MongoDB, Prisma ORM

AI & Generative AI: LLMs, RAG, LangChain, LangGraph, Google Gemini, Prompt Engineering, Puter.js

DevOps & Tools: Docker, Git, GitHub, GitLab, Vercel, Render, Cloudinary, Postman

PROJECTS

DevPilot AI | Full-Stack Multi-Agent Developer Assistant

[GitHub]

React, Vite, FastAPI, LangGraph, LangChain, Google Gemini, PostgreSQL, PGVector, PyPDF, PyGithub

- Built a full-stack multi-agent developer assistant with a supervisor agent routing requests across coding, research, and PDF-RAG sub-agents.
- Added a reviewer agent that evaluates sub-agent responses and returns incomplete outputs for revision, reducing low-quality final answers.
- Implemented GitHub code analysis and PDF RAG using PyGithub, PyPDF, Gemini embeddings, and PGVector similarity search over PostgreSQL.

PicScale | Distributed Image Platform & Monorepo

[Live Demo] | [GitHub]

Next.js, Node.js, Express, TypeScript, PostgreSQL (Neon), Prisma, Cloudinary, Render

- Designed a three-service monorepo separating a Next.js frontend, an Express API gateway, and an isolated background worker, keeping each concern independently deployable.
- Modeled relational schemas with Prisma against a Neon PostgreSQL instance and built a Cloudinary pipeline for on-demand, runtime image transformations.
- Ran image processing asynchronously in the background worker so the API gateway stays responsive under upload-heavy traffic.
- Diagnosed and fixed a Render deployment blocker by reworking the native binary generation step, with no changes to the core architecture.

AI-Resume-Analyzer | AI-Driven Career Tool

[Live Demo] | [GitHub]

React, TypeScript, Puter.js, pdfjs-dist, Zustand, Tailwind CSS

- Built a fully browser-based resume feedback tool with React and Puter.js that parses an uploaded PDF and streams structured LLM feedback in real time, with no backend server.
- Implemented PDF text extraction with pdfjs-dist that handles varied resume formats and encodings.
- Built drag-and-drop file intake with React-Dropzone and centralized app state with Zustand, avoiding prop drilling across the component tree.

kidsportal | Interactive Learning Platform

React, Vite, Tailwind CSS, FastAPI, Python, MySQL, JWT, Google OAuth

- Collaborated in a 3-person team building an educational platform covering content delivery, analytics, and user progress tracking.
- Built end-to-end authentication with FastAPI on the backend and JWT + Google OAuth on the frontend, covering session management, token refresh, and protected routes.
- Designed the MySQL schema for user profiles, authentication state, and video content to support personalized learning feeds.
- Built a cognitive game engine and watch-history dashboard with React state hooks to track game and media progress across sessions.

LEADERSHIP & PARTICIPATION

IEEE | Event Management Team

2024–2025

- Led the Treasure Hunt game during Technovoza, coordinating logistics and participant engagement for the event.

Google Developer Student Clubs | Graphic Designer

2023–2025

- Designed posters and event banners for technical and student events held at the university.

Also: Tezos Society – Tech Team Member (2026) | ICIDSSC – Volunteer (2025)
